

LETTER TYPES

INTRODUCTION

The Company was established in 2011 by Gábor Kovács, a Hungarian individual, with 10 years prior project manager experience in the industry at other reputable Hungarian companies. BEPRO was established based on Gábor's observation that none of his prior employers provided the necessary level of customer service and the quality of the manufactured products were less than perfect as well. In the early years the company operated as an agency, with a limited staff; striving to maximize added value through communication between customers and manufacturers; its aim was to enhance the level of customer service experience and to ensure that the products meet the relevant technical requirements.

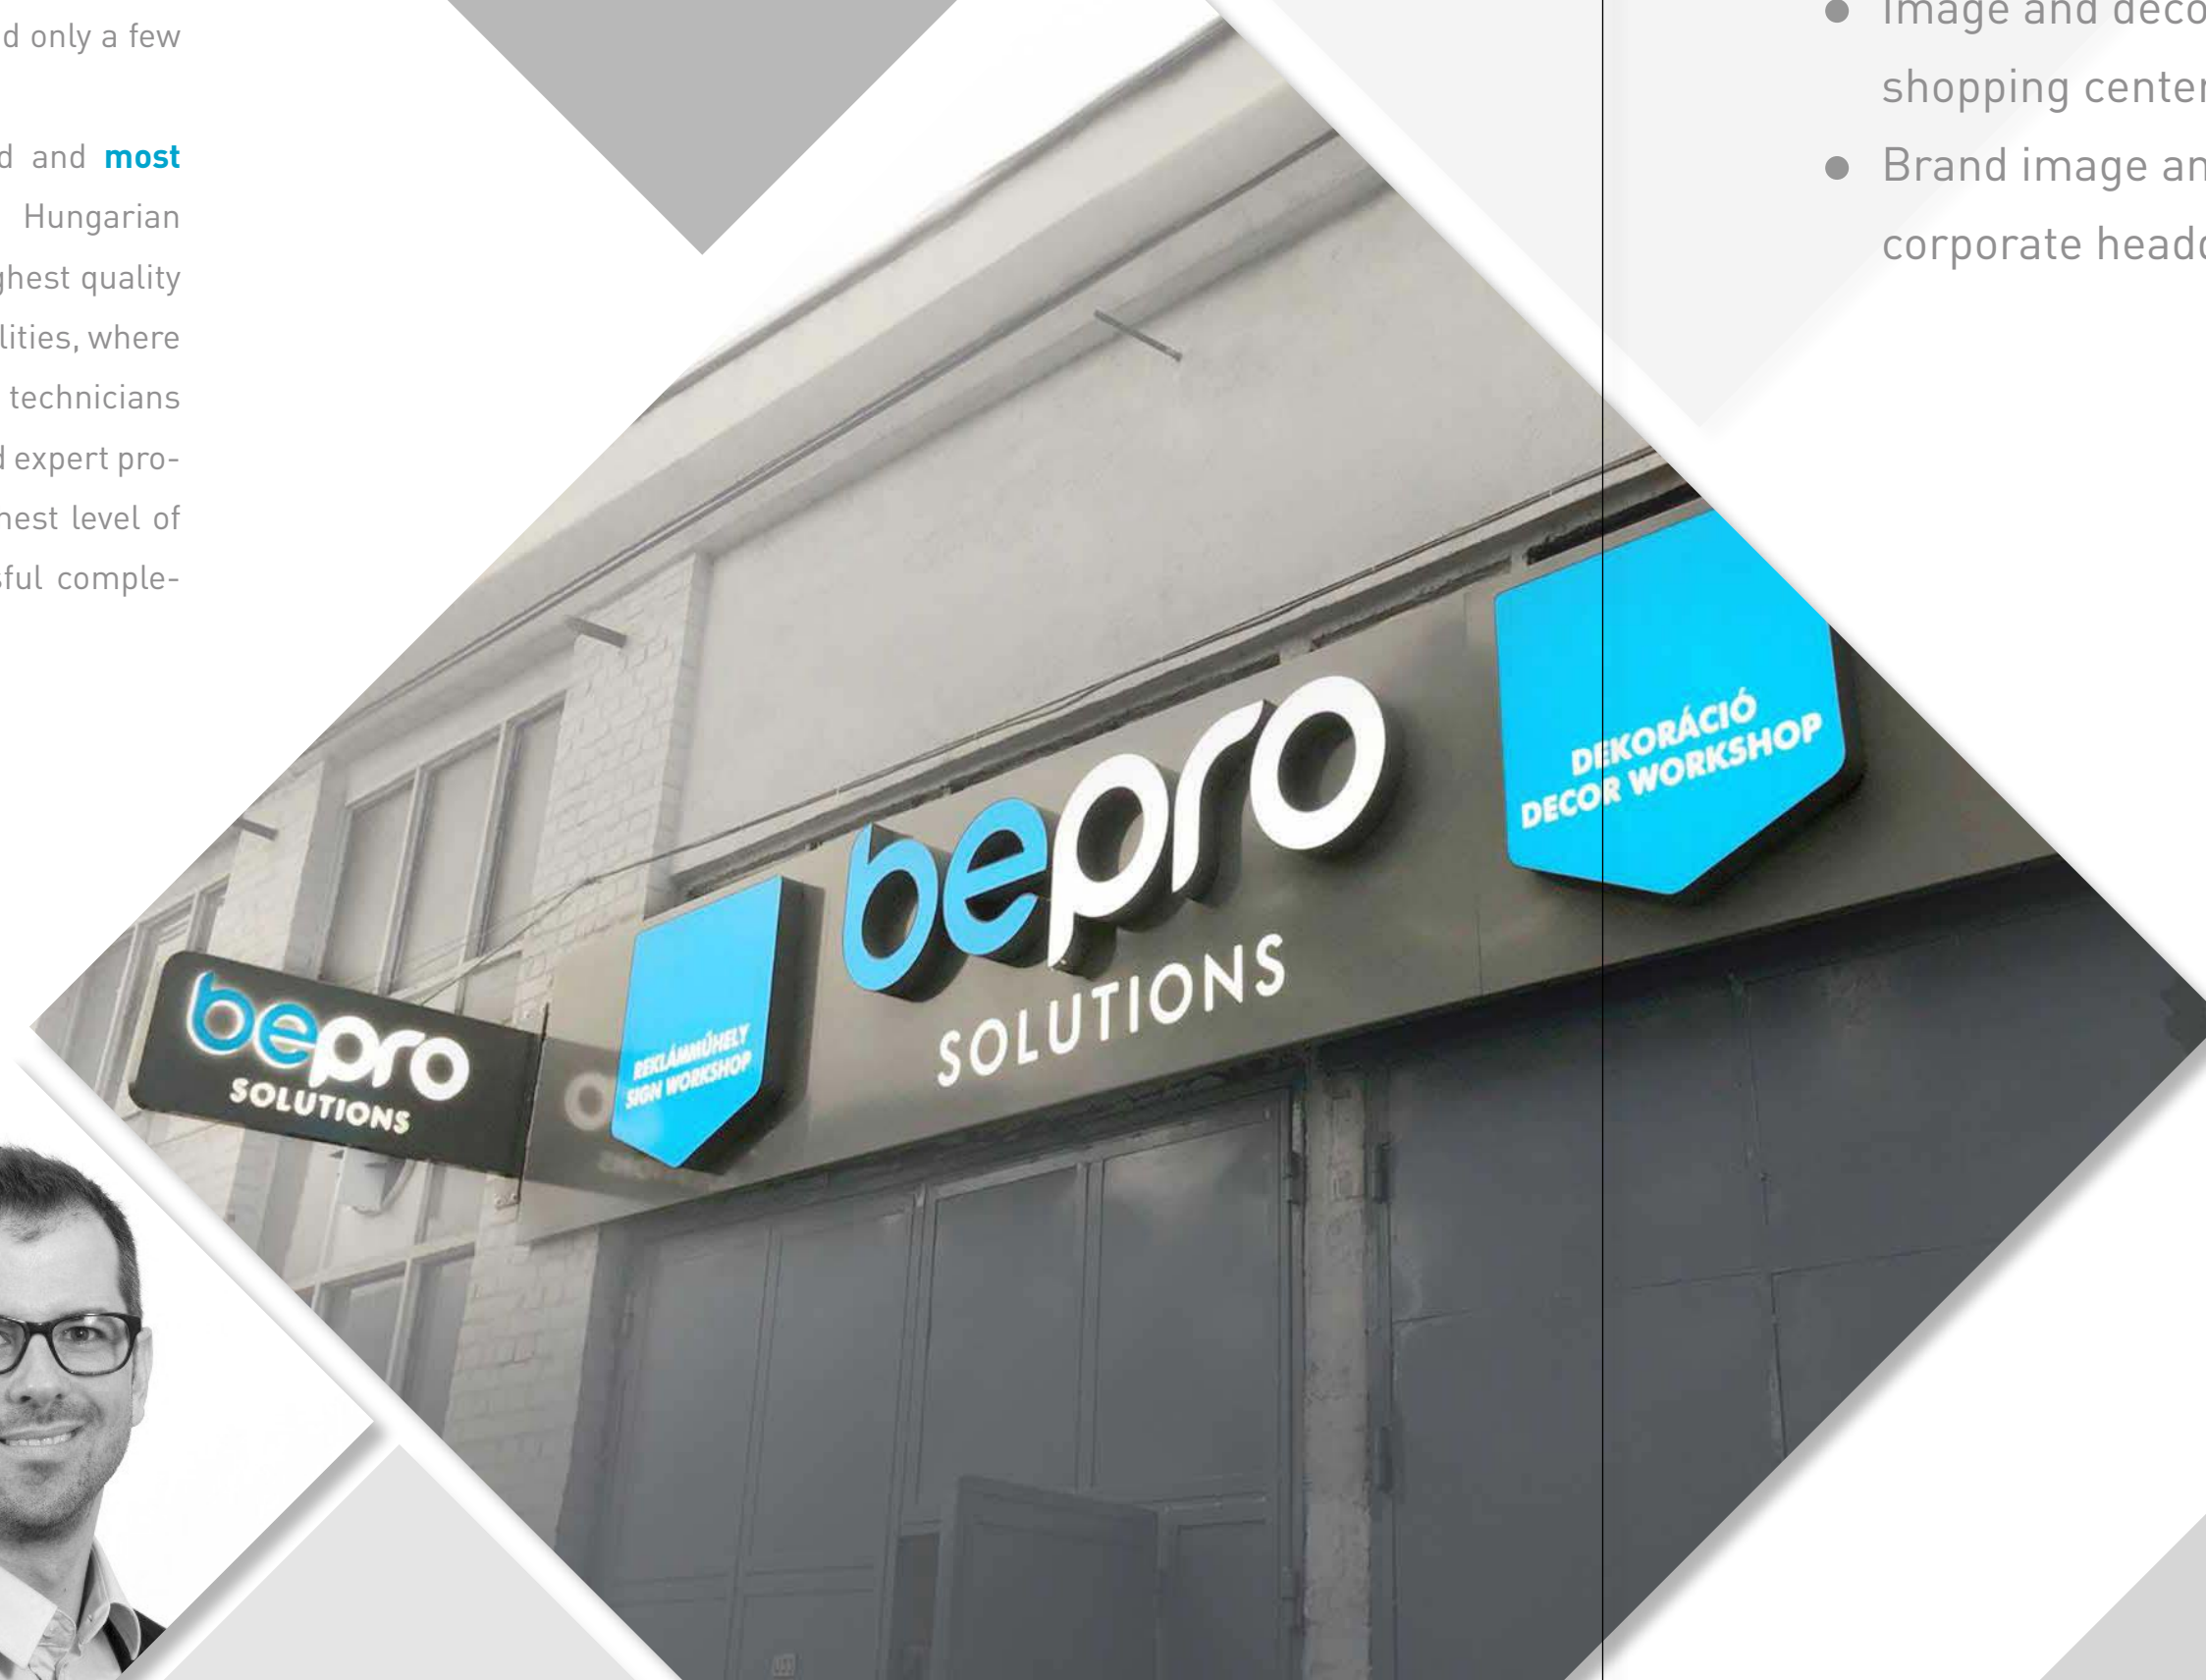

However, we recognized relatively early that key aspects most highly valued by customers, such as quality, deadline and the right price, can only be guaranteed if the company has its own production capability. Consequently, in 2012, we established our own production facility in Halásztelek, not far from Budapest; however, the office and the decoration workshop were both operating at a different location in Budapest.

A significant change was brought about during the spring of 2017, when the various workshop-units, and our head office were moved to one location, our current principal place of business, which is located in the 11th District of

Budapest, near the edge of the city. As a result, our new site has excellent logistic capabilities, particularly since the M1, M7, M0 and M6 motorways are located only a few kilometres from our site.

Today, BEPRO is among the most advanced and most dynamically developing companies in the Hungarian advertising industry. We manufacture the highest quality products in our sophisticated and modern facilities, where locksmiths, painters, electricians and plastic technicians work together with CAD / CAM technicians and expert project manager colleagues to provide the highest level of customer service; thereby, ensuring successful completion of every single project.

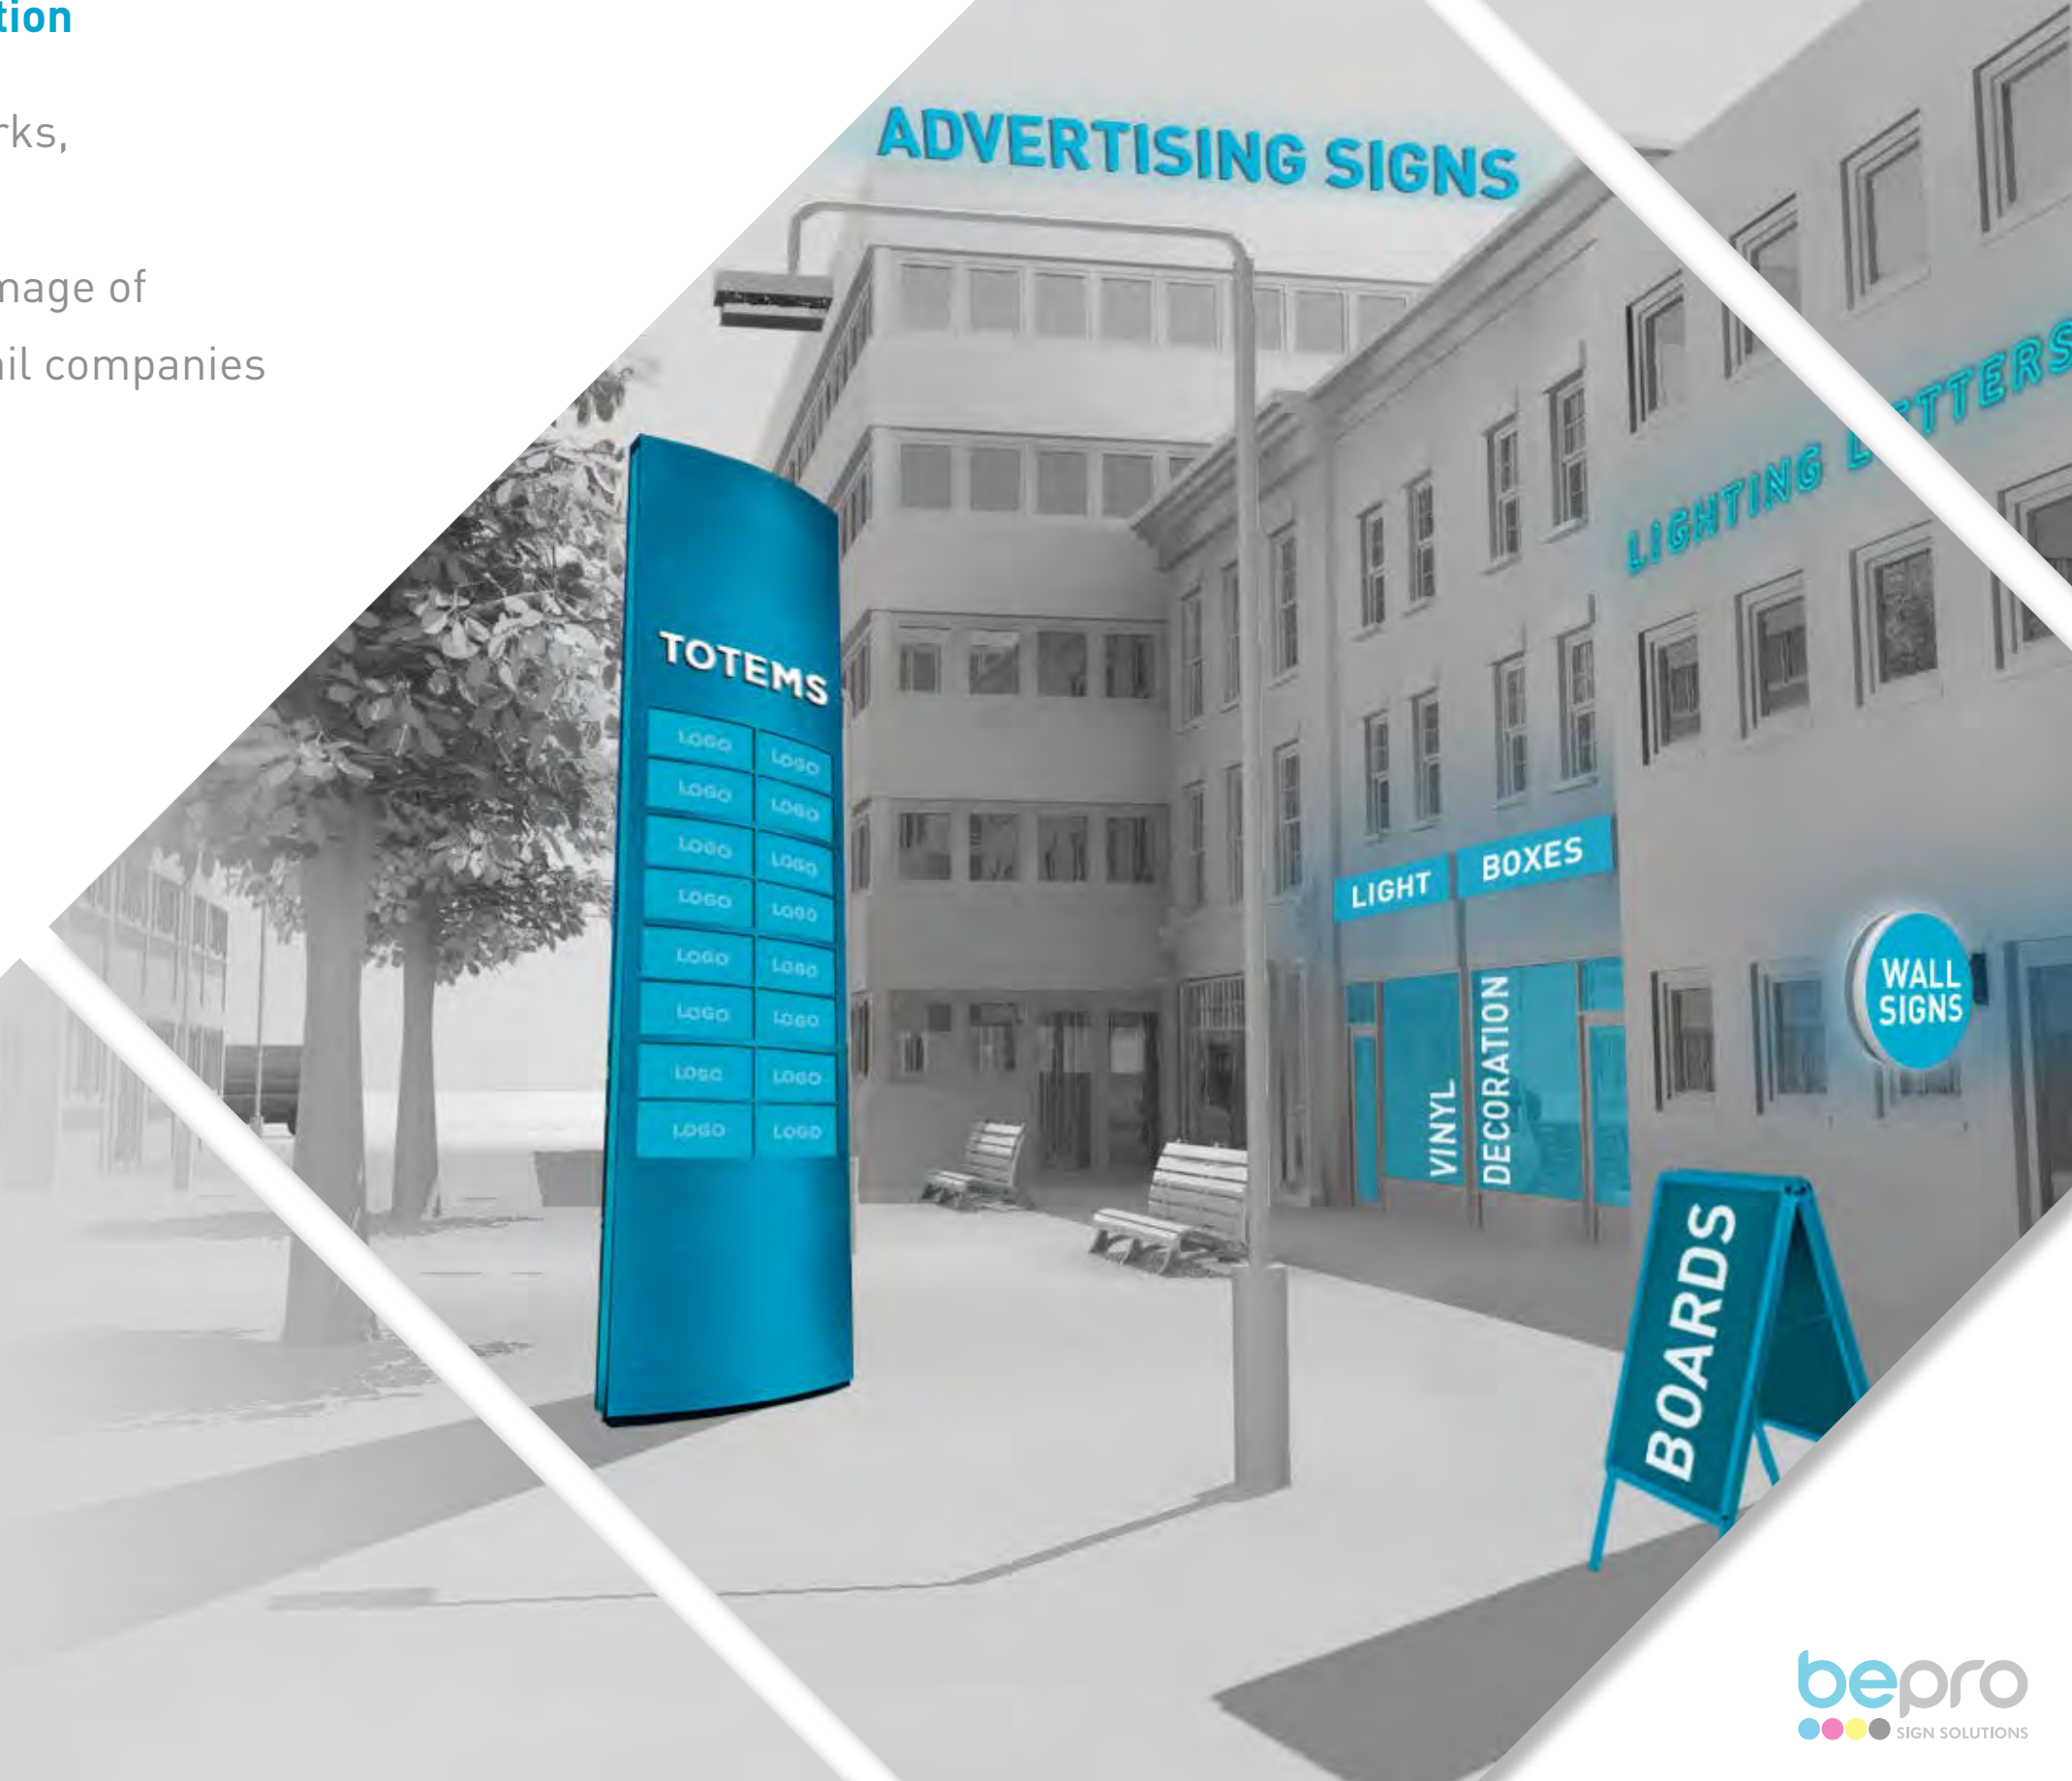

GÁBOR KOVÁCS - MANAGING DIRECTOR

SIGNAGES AND VISUAL IDENTITY

Different type of illuminated and non-illuminated sign solutions for better and more effective visualization

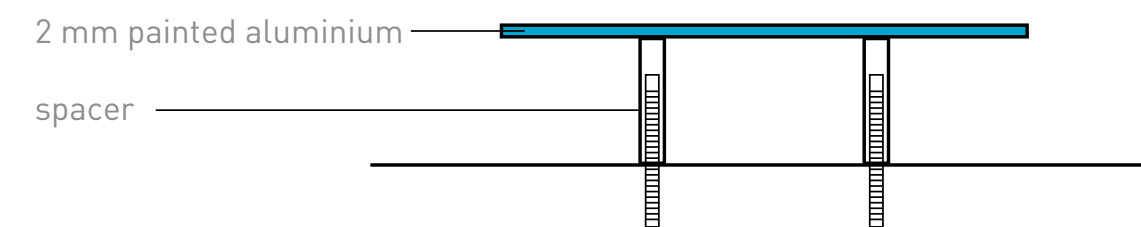

- Image and decorative elements of retail networks, shopping centers, construction investments
- Brand image and product presentation tools, image of corporate headquarters, exhibition stands, retail companies

P11

Non-illuminated letter type

Profile 11 is a non-illuminated letter type mostly cut out from **steel**, **powder coated alu**, copper, brass or other materials. The flat letters can be glued to the wall directly, alternatively spotwelded spikes or doublesided tape in the back for mounting.

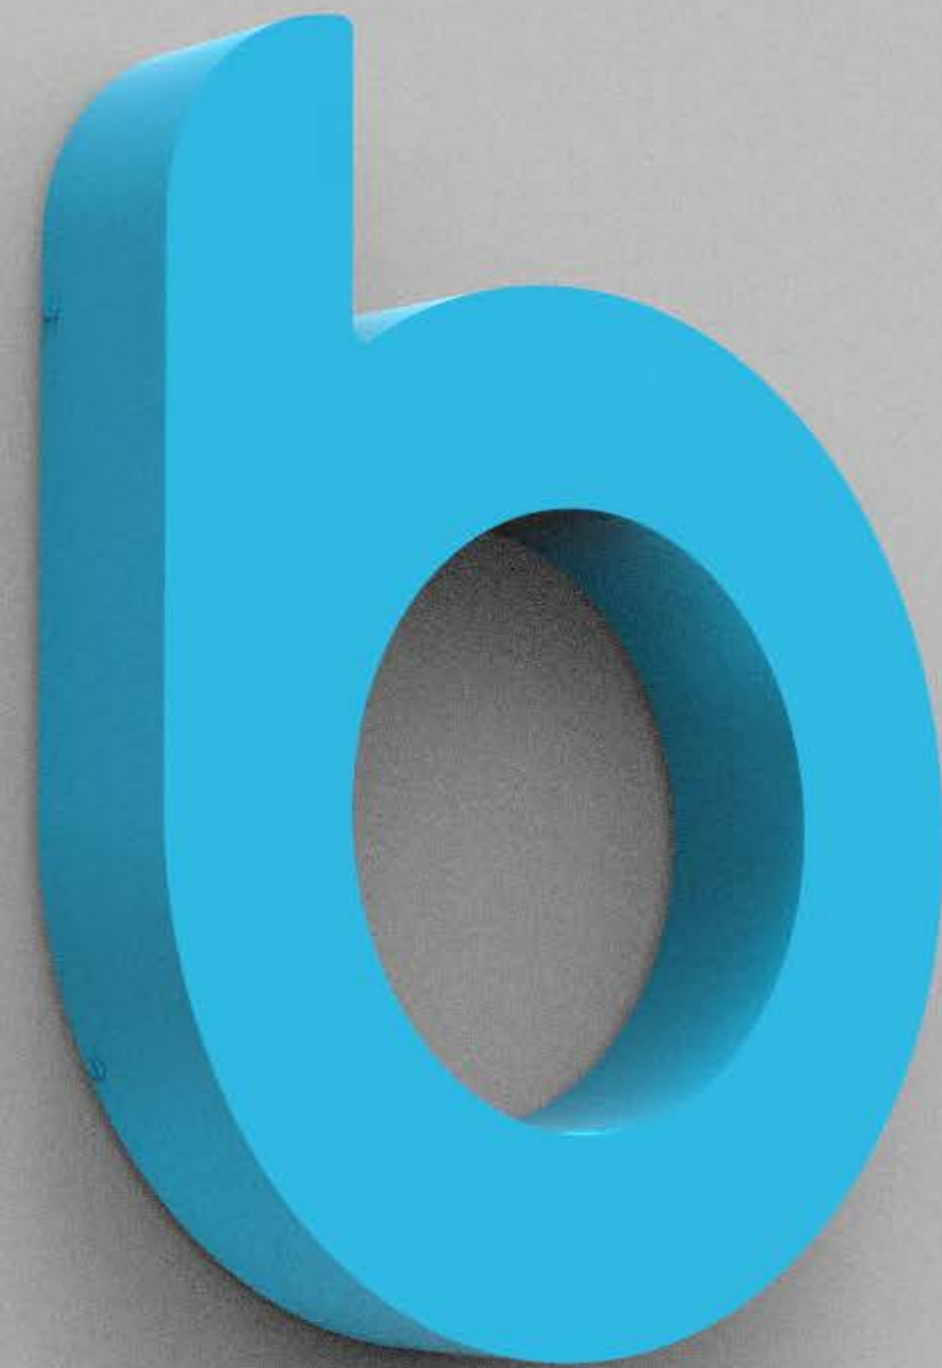

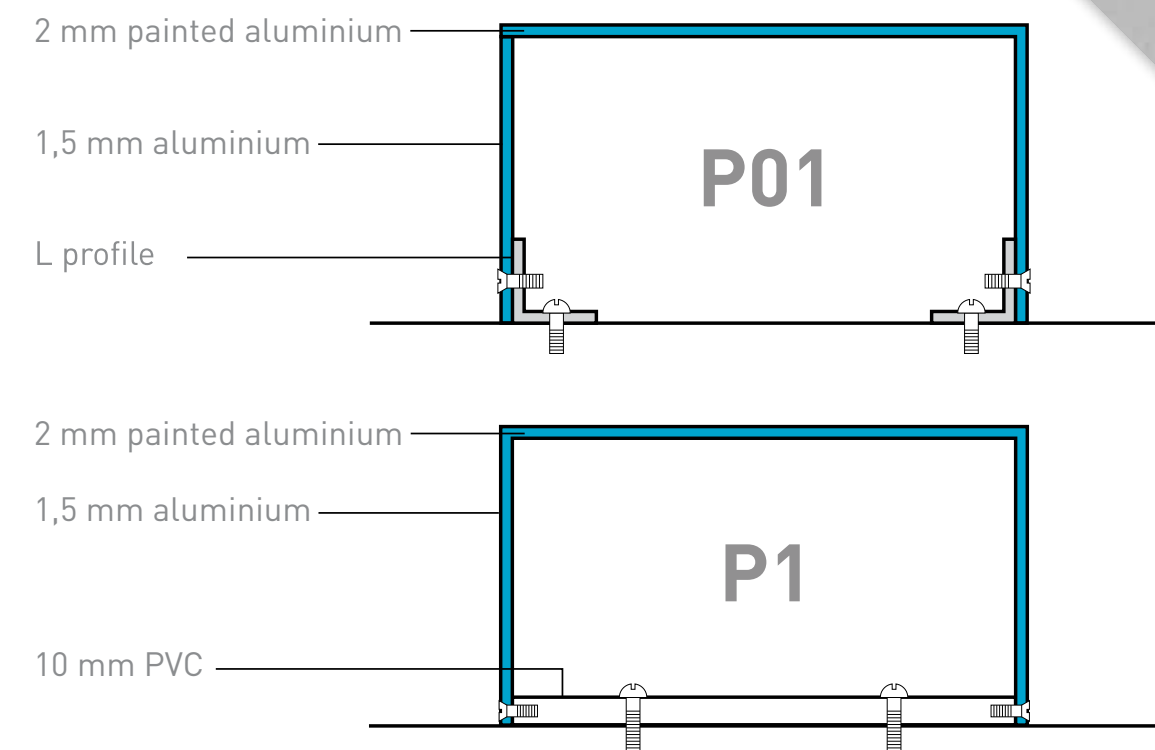

P01 and P1

Non-illuminated letter types

Profile 01 is a non-illuminated letter type which can be produced either from **steel** (stainless/polished) or **powder coated aluminium**. The profile depth can vary depending on the height of the letter, optimally should be 1/10 of the letter height. The letters can stand as separate or premounted on aluminium profiles.

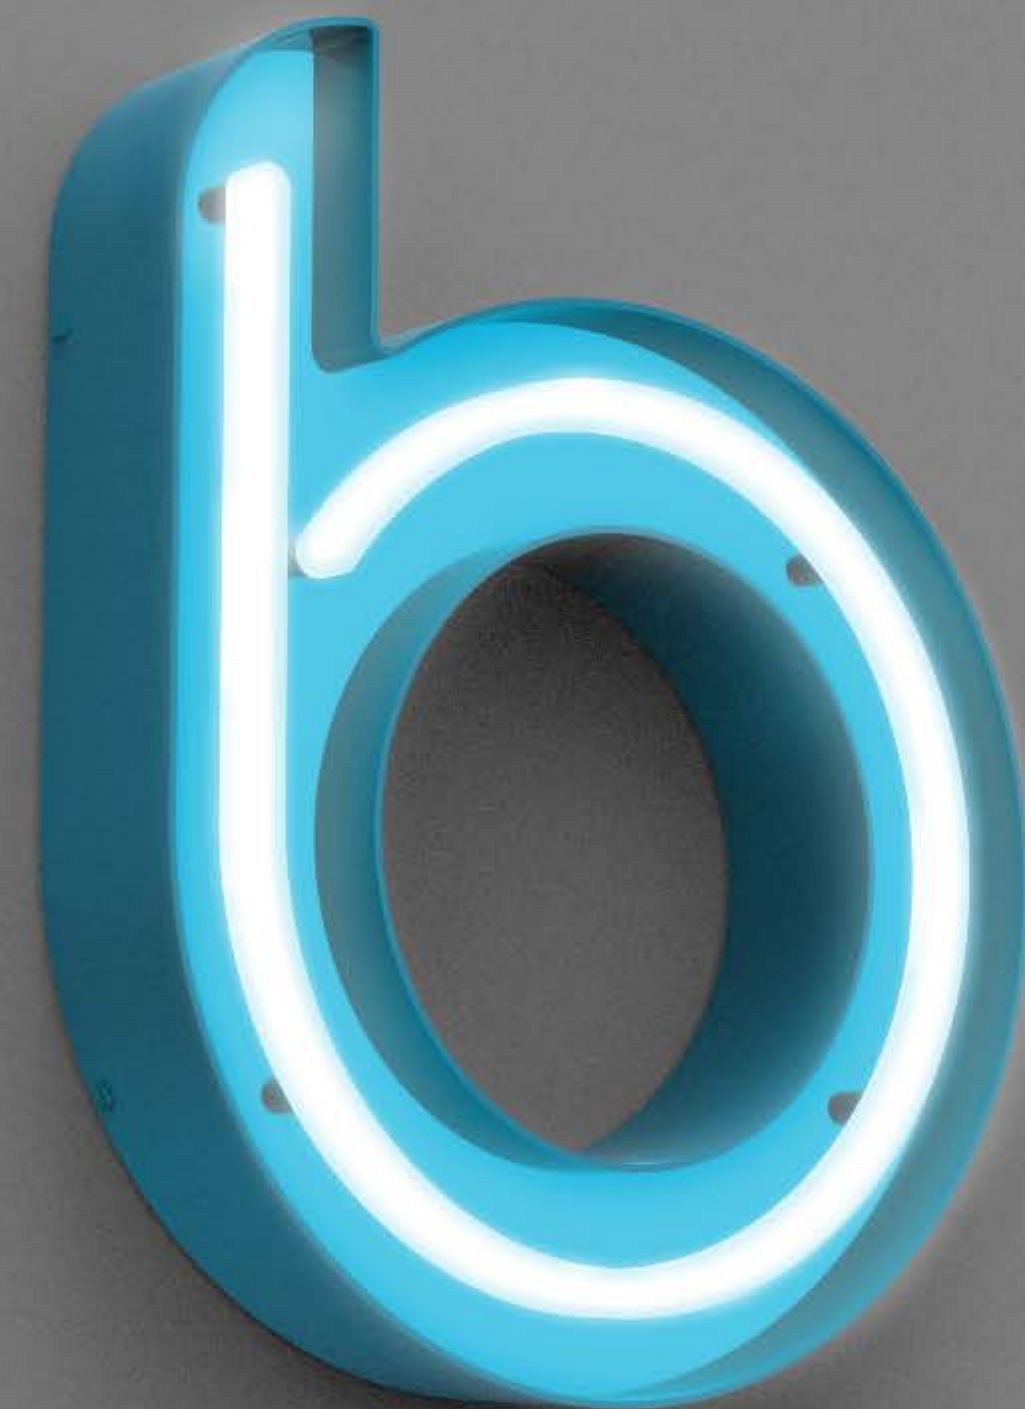

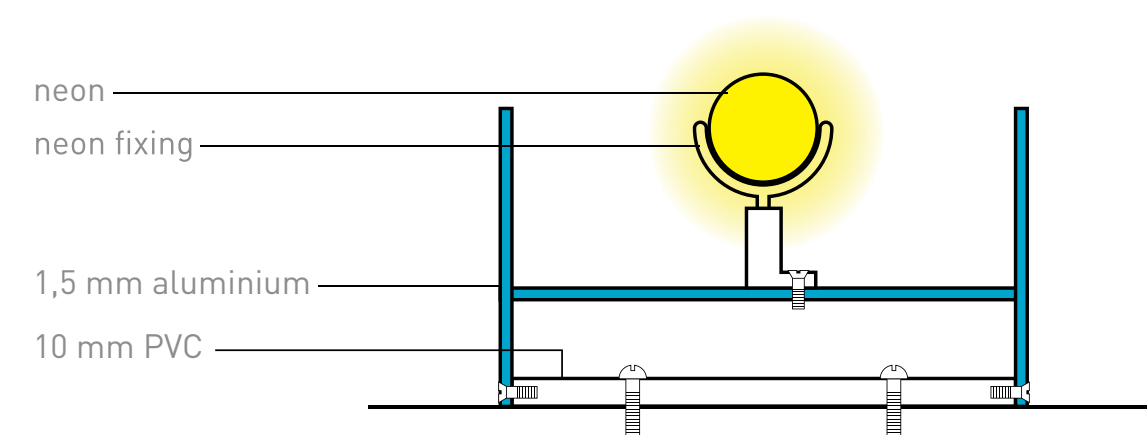

P1 profile type has additionally either non-painted bended alu/steel or 10mm PVC backside in order to make the letters more stiff. Sometimes it is called „double Pr.01“.

P2 NEON

Neon letter type

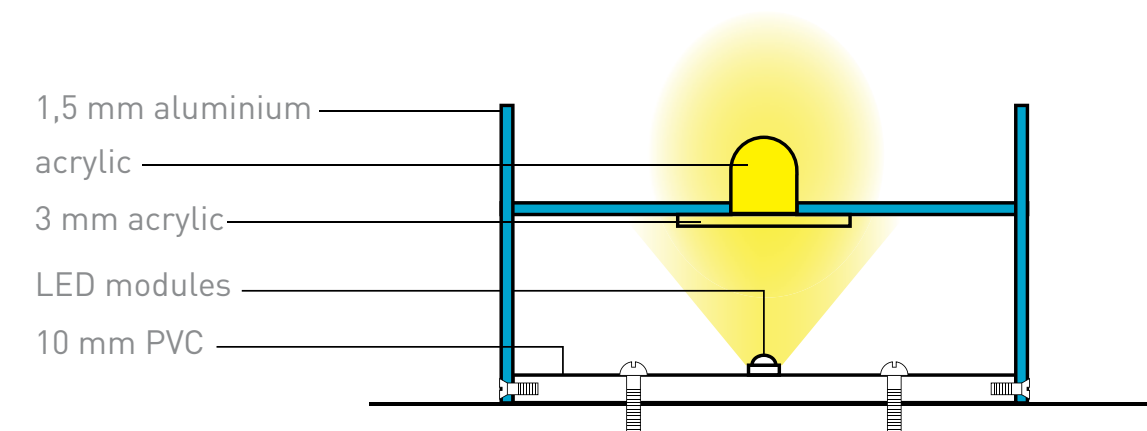

Profile 2 is a letter type made from powder coated aluminium. **The neon** tubes are installed on the front of the letter. The edge of the sides are sticking out from the front which concentrates the light and protects the neon tubes from the environmental adversities.

P2 LED

“Neonfake” letter type

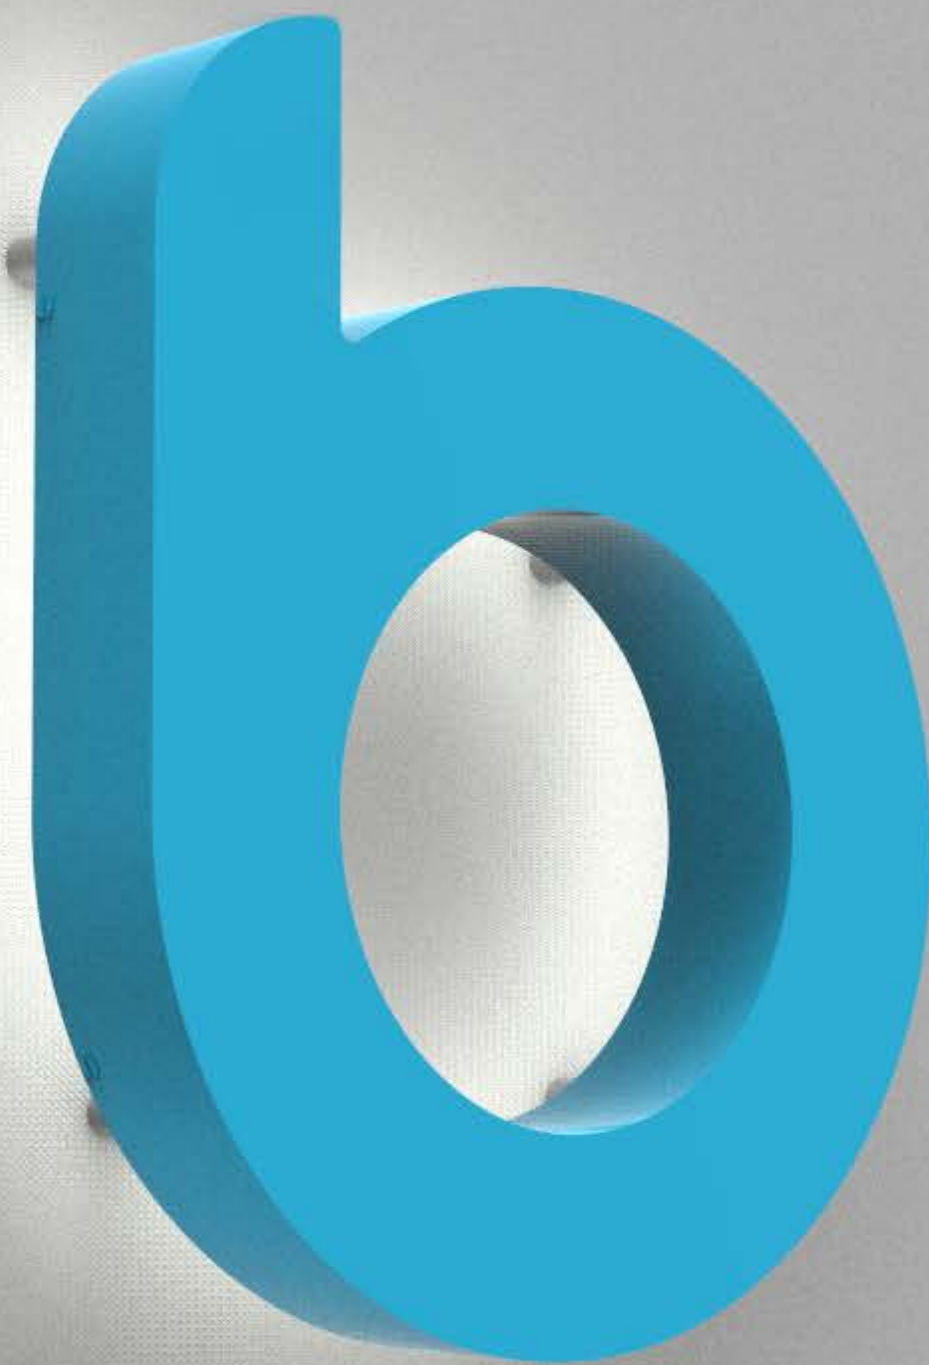

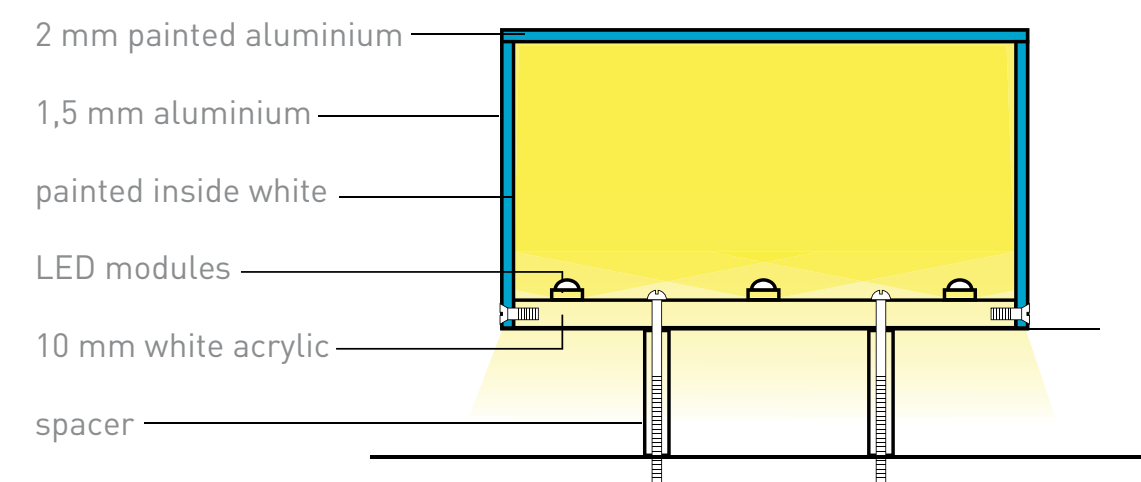

Profile 2 is a letter type made from powder coated aluminium.
The “neonfake” letters are built up similarly as P2 NEON but the neon tube is substituted with cut out cast acrylic which is illuminated from inside the letter by LED-s causing similar effect as neontubes.

P3

Backlighting letter type

Profile 3 is a backlighting letter type produced from steel (stainless or polished) or aluminium. The LED-s are built in and the letters are **lighting back towards the wall** so the letters are lighting indirectly from the wall surface, this is the so-called corona effect. The letters can be mounted either directly on the wall by distance keepers or premounted on aluminium profiles painted on the color of the wall.

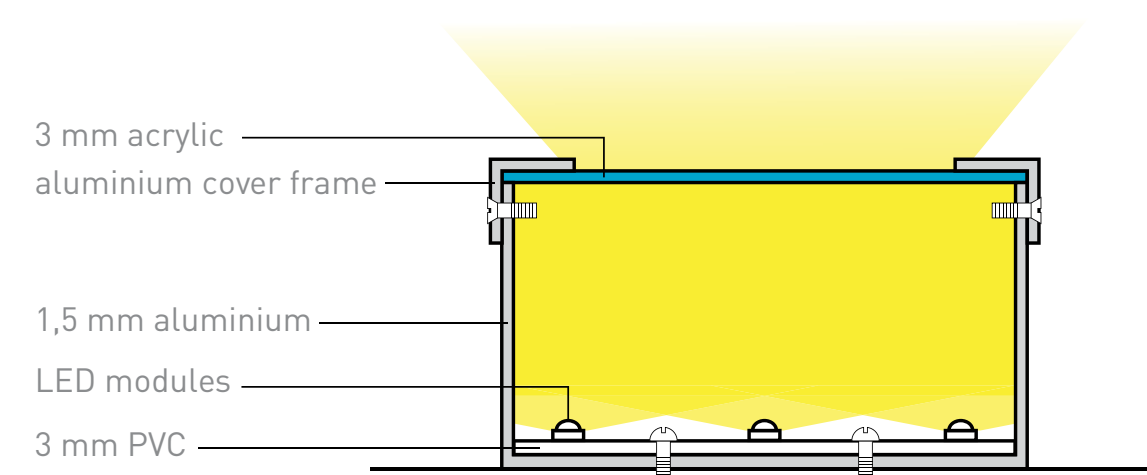

P4

Frontlighting letter type

Profile 4 is a frontlighting letter type where the returns and backside is made of powder coated aluminium, The **front is made of acrylic** fixed to the side **with cover frame**. The letter is front illuminated by LED-s resulting uniform, homogenous light surface. Mounted on painted aluminium profiles or just standing as separate letters directly on the wall.

Recommended for big letters usually **from 80 to 200cm height**.

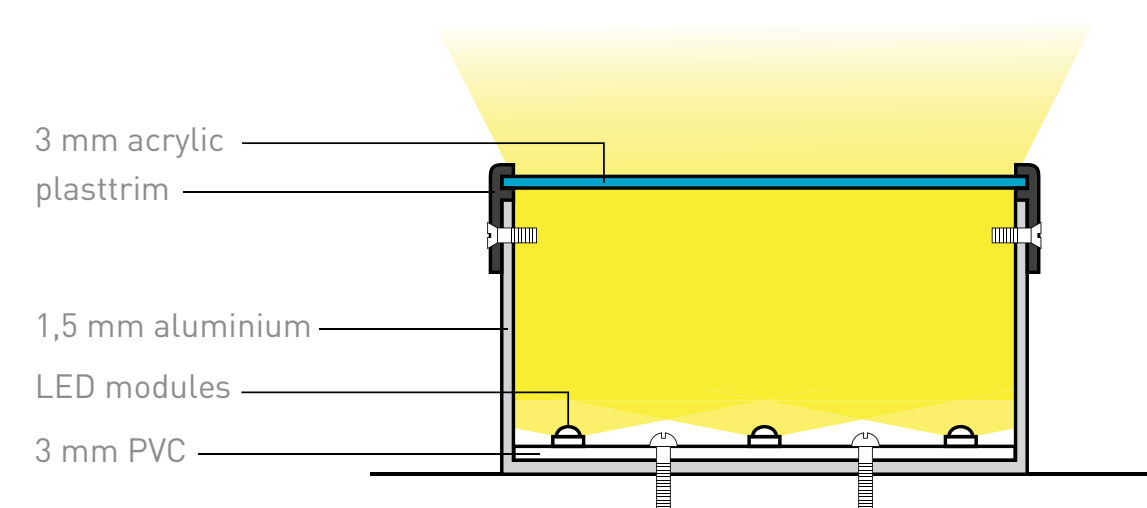

P5

Frontlighting letter type

Profile 5 is a frontlighting letter type where the returns and backside is made of powder coated aluminium, The **front is made of acrylic** fixed to the side **with plastic trim**. The letter is front illuminated by LED-s resulting uniform, homogenous light surface. Mounted on painted aluminium profiles or just standing as separate letters directly on the wall.

Recommended for bigger letters usually **from 50 to 100cm height**.

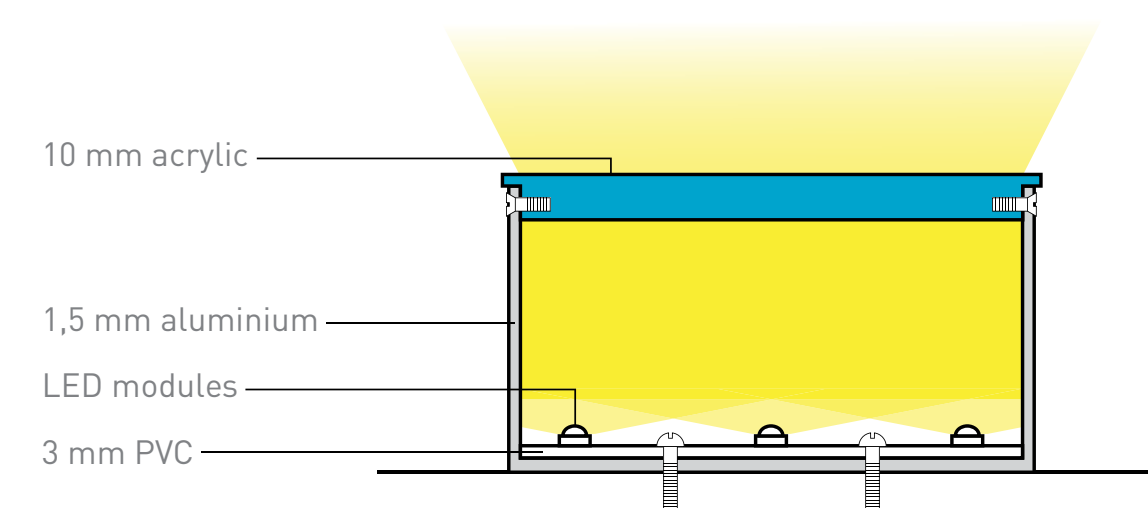

P6

Frontlighting letter type

Profile 6 is a frontlighting letter type where the returns and backside is made of powder coated aluminium. The **front is made of acrylic** screwed to the side of the letter. The letter is front illuminated by LED-s resulting a uniform, homogenous light surface. Mounted on painted aluminium profiles or just standing as separate letters directly on the wall.

Recommended for bigger letters usually **up to 80cm height**.

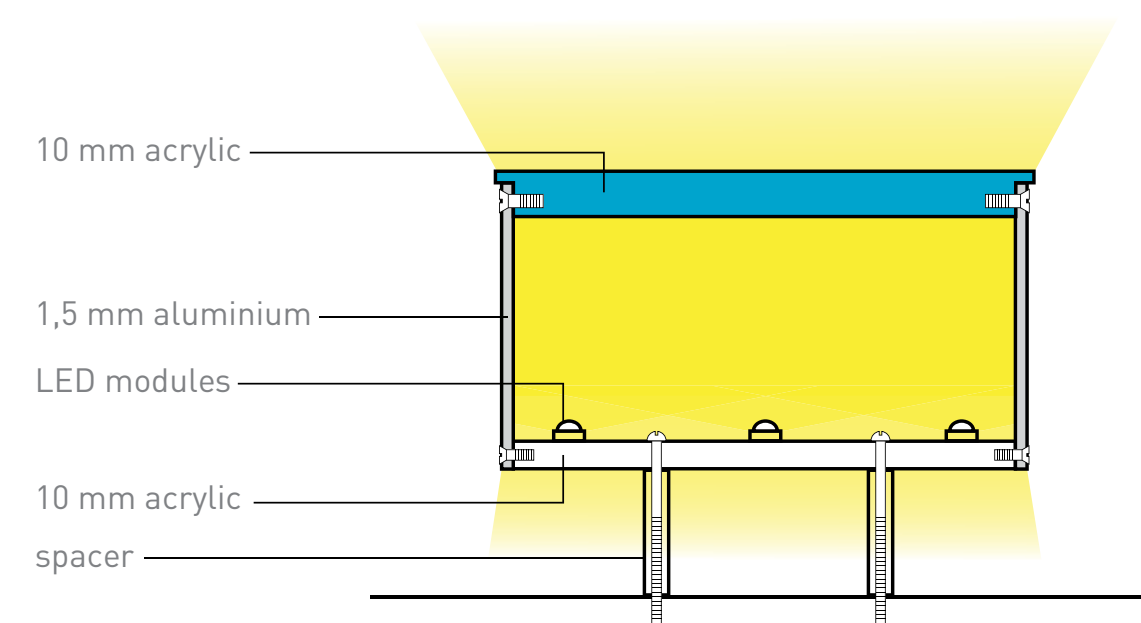

P6+3

Front - and backlighting letter type

Profile 6+3 is a front- and backlighting letter type where the returns are made of **powder coated**. The **front and back is made of acrylic** screwed to the side of the letter. The front is illuminated by LED-s resulting a uniform, homogenous light surface, meanwhile the letter has backlighting, corona effect. Mounted on painted aluminium profiles or just standing as separate letters with distance to the wall.

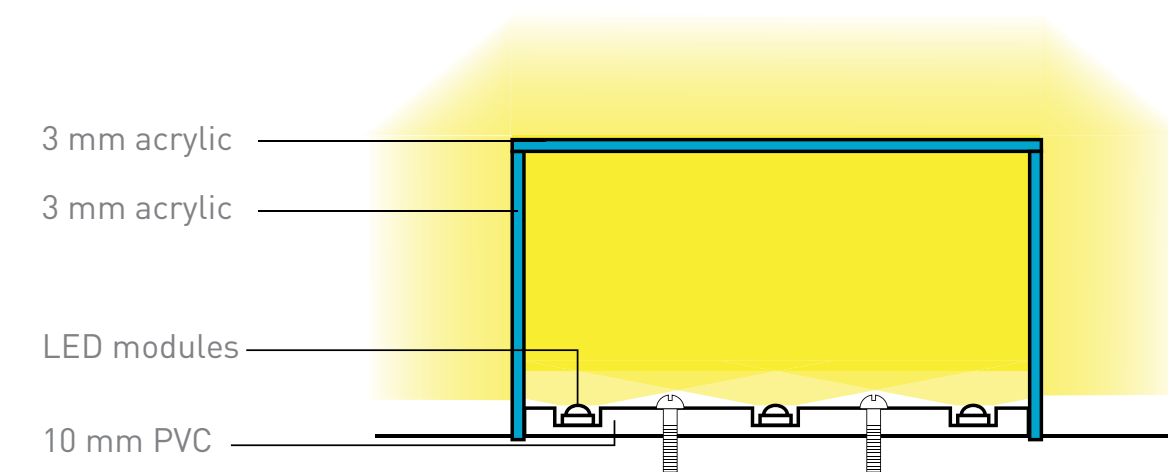

Recommended for letters usually **up to 80cm height**.

P8

Front - and sidelighting letter type

Profile 8 is a front- and sidelighting letter type made of **acrylic** where the returns are partly or completely lighting, the backside made of aluminium. The LED-s are placed in resulting **homogenous light** surface all around the letter. Mounted on painted aluminium profiles or just standing as separate letters directly on the wall.
